

PAVAN KUMAR SADASHIV

Backend Software Engineer | Systems Architect | Founder & MD

Mangaluru, Karnataka, India | Email: hrlinternationalprivatelimited@gmail.com | GitHub: github.com/hrlpavan | GitLab: gitlab.com/hrlpavan

To: Engineering Hiring Team & Talent Acquisition

Company: GitLab Inc. / GitLab India

Position: Intermediate Backend Engineer, India

Dear GitLab Hiring Team,

I am writing to express my enthusiastic interest in the **Intermediate Backend Engineer** position in India. Having built and scaled complex software systems as the Founder and AI Systems Architect at HRL International Private Limited, I have developed a deep appreciation for the core tenets of GitLab: remote-first autonomy, transparent written communication, rigorous peer code review, and the deliberate adoption of AI as a daily engineering multiplier.

As an active member of the **GitLab Community Contributor Program (Work Item #5499)**, I am already immersed in GitLab's ecosystem and workflows. I understand the importance of community forks, asynchronous merge request reviews, and automated CI/CD validation. My engineering philosophy mirrors what this role demands:

- **Full-Lifecycle Feature Ownership:** I am accustomed to taking requirements from initial problem definition and schema design through to automated test coverage, deployment, and operational monitoring with minimal guidance.
- **Solid Backend & Data Fundamentals:** From designing ACID-compliant transaction boundaries in SQLite/PostgreSQL to building asynchronous worker pipelines in Python (FastAPI/PyArrow) and zero-bloat REST servers, I build for observable reliability and zero regression.
- **Disciplined AI Fluency:** I integrate AI tools into my daily coding workflow to accelerate development and discover edge cases, maintaining the critical engineering skepticism required to validate code correctness, security boundaries, and performance limits.
- **Thriving in Asynchronous Work:** I communicate complex technical tradeoffs clearly in writing, ensuring collaboration across timezones is predictable, documented, and friction-free.

Whether contributing to satellite services like the AI Gateway and code parsing engines or scaling core platform APIs, I am eager to contribute meaningful, reliable code that empowers millions of developers worldwide. Thank you for your time and consideration. I look forward to discussing how my experience and drive can support GitLab's mission.

Sincerely,

Pavan Kumar Sadashiv

Founder & AI Systems Architect, HRL International Private Limited
